

DEALING WITH DINGS AND DENTS

Fill n' Finish promises to be the new best friend of luthiers in need of repairing finishes in a professional way.

It works either as a drop fill repair, or as a finishing product that can be sprayed or brushed. If used with an accelerator (also provided by the same vendor) it will dry super fast, and it will stay flexible and resilient. It can be easily polished for a high gloss and it won't crack over time

The producer claims that its carcinogenic free formula (it doesn't contain chloroform, benzene, or paraformaldehyde) has a longer shelf life than any glue in the market. More information on www.gearupproducts.com. ||||
